UNSURPASSED QUALITY & VALUE

Custom ambulances by AEV are the product of a formula merging time-tested ambulance building methods, innovative engineering and proven materials and components.

BODY TEST AT 36,000 POUNDS

"We loaded the test body to over 340% of the vehicle's curb weight and it passed without difficulty. That equates to almost 18 tons of weight on the top and side of a modular body. The body passed with flying colors," states Jack Sweeney of Certified Inspection Service, who performed this test. "To our knowledge, this is the first test of this magnitude that has been performed on a modular ambulance body."

MODULE STRUCTURE

- SeamFree™ door, frame and window construction improves durability and appearance.
- An exclusive roll cage design allows for an additional 6" to 16" in cab seat travel, resulting in more leg room.

HVAC & FILTRATION

- Heat and AC in ceiling duct work for improved circulation and more efficient heating, cooling and air exchange.
- HEPA capable AirCare™ multi-stage filtration system.

WARRANTY

- An exclusive 36-month Corrosion Warranty complements the strong warranty package.

INDUSTRY LEADING SAFETY & INNOVATION

In 2000, AEV shattered industry records by testing and certifying the AEV modular body to more than double the 150% curb weight Federal Standard. In addition, they performed a body side test that had never been tested before. Now AEV has broken that record with a 55,000 body test on the top and side of the module. The AEV ambulance body is now certified up to a 500% curb weight level.
